

Veeam Management Pack for System Center

Unleash the power of System Center for vSphere and Hyper-V

Veeam® Management Pack™ (MP) for System Center is the most comprehensive System Center extension for managing and monitoring VMware vSphere, Microsoft Hyper-V and Veeam Backup & Replication™.

Today's IT decision makers must be armed with accurate system data to make informed, strategic decisions. Veeam MP provides the IT Administrators with critical insights from monitoring dashboards, alert management, reporting and capacity planning to keep business and IT services running smoothly.

Complete visibility

For the true app-to-metal picture, enhance your System Center investment with a management pack that fully understands the relationship between your physical and virtual resources. Veeam MP delivers deep visibility of your entire environment, all from a single pane-of-glass within the System Center Operation Manager console.

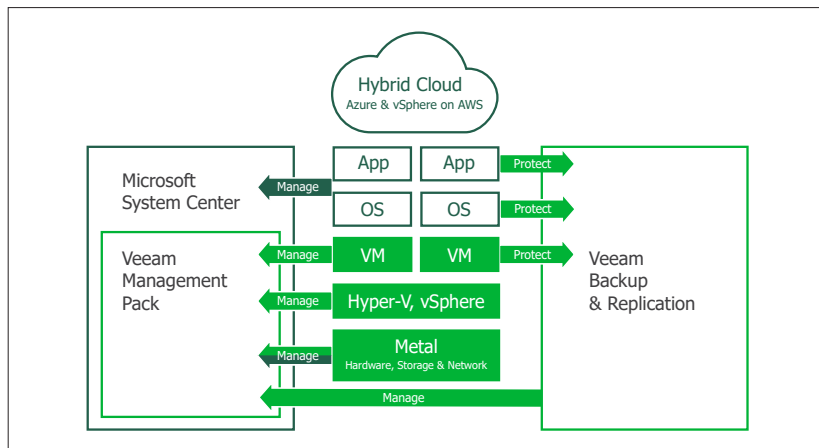

Figure 1. Veeam and Microsoft System Center work better together to deliver app-to-metal visibility and protection.

Veeam MP gives you complete, real-time data to help solve problems fast and plan for the future. From the Veeam Morning Coffee Dashboard® for a broad view of critical metrics to start your day, to detailed alert management and reporting, Veeam MP provides the visibility you need to manage your mission-critical applications and services.

Veeam MP

Veeam MP includes strategic, capacity-planning tools with reports that forecast and help model on-premises and cloud resources needed to efficiently power your business. This includes deep-dive reports on oversized and undersized VMs, zombie VMs, lost storage and real-time alerts to notify you if your Veeam backup repository will run out of capacity or if a Hyper-V or vSphere cluster will run out of memory.

“Veeam MP gives us much-needed visibility into our virtualized environment, which lets us resolve issues before customers are affected.”

Mario Angers
Senior Manager, Systems
University of British Columbia

FEATURES AND BENEFITS

- Get complete visibility of Hyper-V and vSphere environments in System Center.
- See at-a-glance, health statuses of specific areas of your virtual data centers, including real-time monitoring for all your Veeam Backup & Replication environments in the Veeam Morning Coffee Dashboard.
- Easily stream Veeam MP alerts and performance data into Microsoft Operations Management Suite for instant business insights into your on-premises infrastructures.
- Maintain complete control and visibility for all your Windows-based (physical) and virtual-based (VMware and Hyper-V) Veeam-powered backup jobs.
- Manage and plan for growth with capacity-planning reports.
- Predict resources needed to run your workloads in a hybrid cloud.
- Get detailed snapshot and checkpoint tracking and reporting.
- Find problems fast and shorten the time between problem discovery and recovery.
- Increase data-center efficiency using analysis reports to right size your VMs, find idle VMs and reclaim critical resources.
- Track all your VMware vSphere environments — even if they are deployed on Amazon Web Services.

High-Speed Recovery

With the increasing demands for 24x7 application and service Availability, Veeam understands your need to shorten the time between problem discovery and system recovery. Veeam MP helps you quickly identify problems at the physical host, VM and application layer. You immediately see where the real problem is and how it will affect business. As a result, your IT teams can eliminate the risk of blind spots, resolve problems faster and ensure SLA with greater confidence.

Verified Recoverability

Veeam MP's real-time monitoring confirms both Veeam backup job success and completion within the backup window. With Veeam MP's new detailed backup reports, you will know that you are ready to meet your RPO. Veeam MP will proactively alert you if RPO targets are in danger of falling outside of desired ranges.

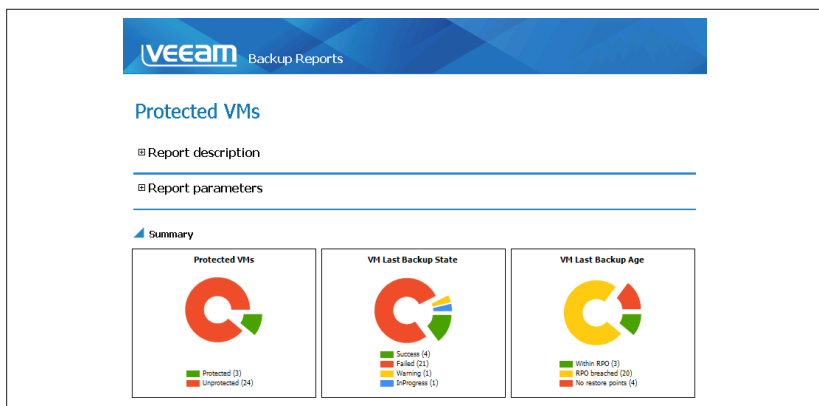

Figure 2. The Protected VMs report analyzes backup protection of your VMs

The proactive monitoring in Veeam MP, coupled with Veeam Backup & Replication's high-speed recovery, keeps the total time of outages and issues to a minimum. And, with continuous visibility of the mission-critical virtualization and protection infrastructure, you know that your business data is available – and protected.

Veeam is featured in Microsoft Technology Centers around the world. Contact your local Veeam representative for a demo and assistance with your proof of concept.

Veeam MP for System Center is Microsoft-certified for Windows Server 2012 R2 Hyper-V and System Center 2012 R2.

Supported platforms

Microsoft platforms:

- Microsoft System Center 2012 SP1 Operations Manager and later (including Operations Manager 2019)
- Microsoft System Center 2012 SP1 Virtual Machine Manager and later (including Virtual Machine Manager 2019)
- Hyper-V 2012 and later (including Hyper-V 2019)
- Microsoft Operations Management Suite Add-on
- Microsoft Azure Account
- Optional: Microsoft PowerBI subscription

VMware platforms:

- vSphere 4.0 and later (including vSphere 6, vSphere 6.5 and vSphere 6.7)

Veeam Backup & Replication platforms:

- Veeam Backup & Replication v7 patch 2 and later (including 9.5)
